HONEY PROCESSING EQUIPMENT

Model 3100H 9 Frame Hand Extractor

Congratulations on purchasing the best hobbyist extractor on the market. We are confident that you will find a lifetime of enjoyment from our products. Our company was founded on the idea of equipment that is "built to last a lifetime." With minimum care, this machine will last a lifetime.

Your extractor is ready to use straight out of the box. We recommend running warm soapy water through it before its first use. If you ordered a leg kit, assemble and bolt it to the extractor. Your extractor is belt driven, and you should expect 15+ years of enjoyment before replacing the belt.

Your extractor is designed to hold 3/6/9 frames. You have the ability to extract 6 medium and/or shallow frames radially, and 3 medium/shallow/deep frames at once.

BEFORE EXTRACTING
MAKE SURE YOUR
HONEY GATE IS OPEN

Once you have loaded your frames, start spinning slowly. Reposition your frames if your machine is spinning off balance. If you are extracting 6 frames radially, they will not need to be flipped, nor do you need to reverse the direction of spinning. Radial extracting will do both sides at once. If you choose to load 3 frames tangentially, they will need to be flipped, and the process repeated.

When you are finished extracting, you may rinse out the extractor with hot water. Should you choose to remove the basket, be careful not to lose the 1/2" stainless steel ball bearing that sits in the cup inside the conical bottom of the extractor. Pack food-grade grease in the ball bearing cup after cleaning.

When you are tired of hand cranking, we offer a power conversion kit. Please call for pricing and availability.
