

MAXANT

HONEY PROCESSING EQUIPMENT

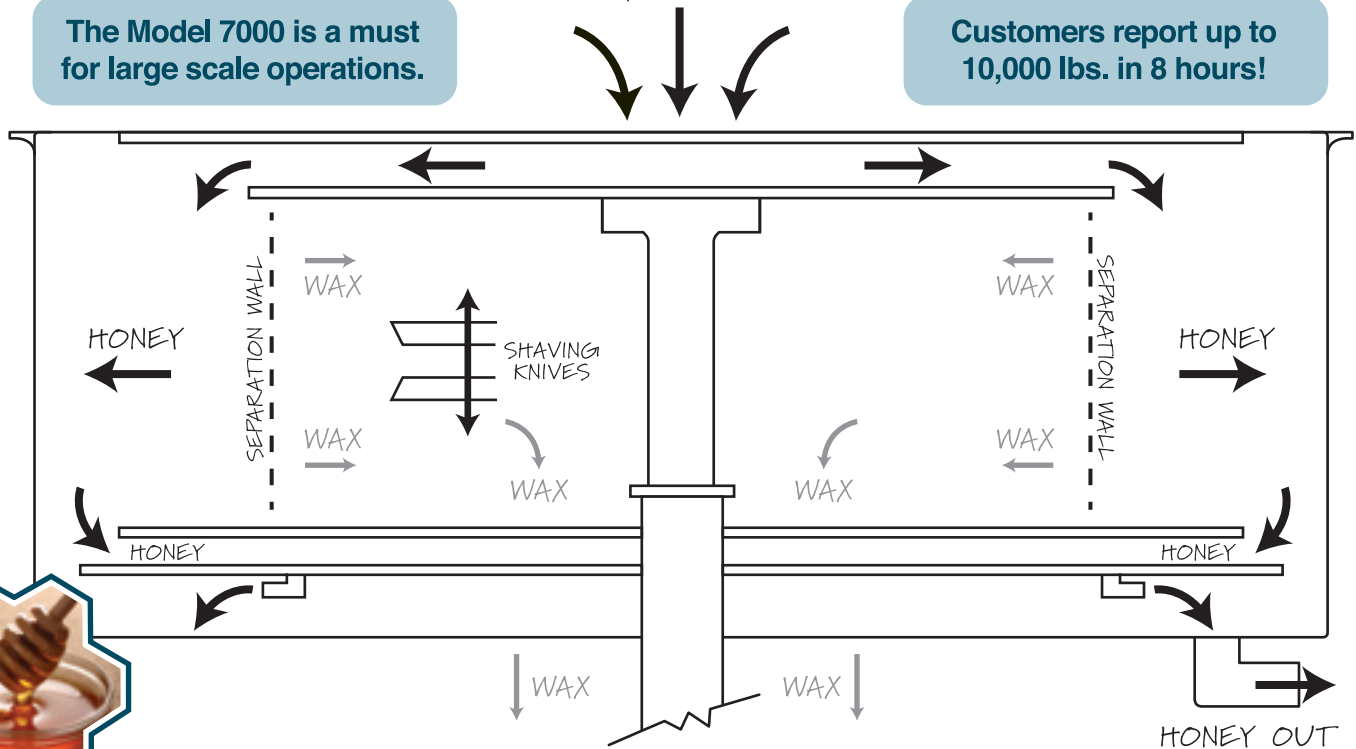

Model 7000 Continuous Feed Thru

The Model 7000 is a must for large scale operations.

HONEY / CAPPINGS IN

Customers report up to 10,000 lbs. in 8 hours!

The Model 7000 is designed to separate wax from the honey using centrifugal force. The heavy honey is spun to the outer wall of the drum, while the dry wax accumulates towards the center opening. Reciprocating knives shave away the wax while the honey is expelled through the ports at the bottom of the drum.
